

Supplementary Figure 7. Species-specific Motifs in the HD Family

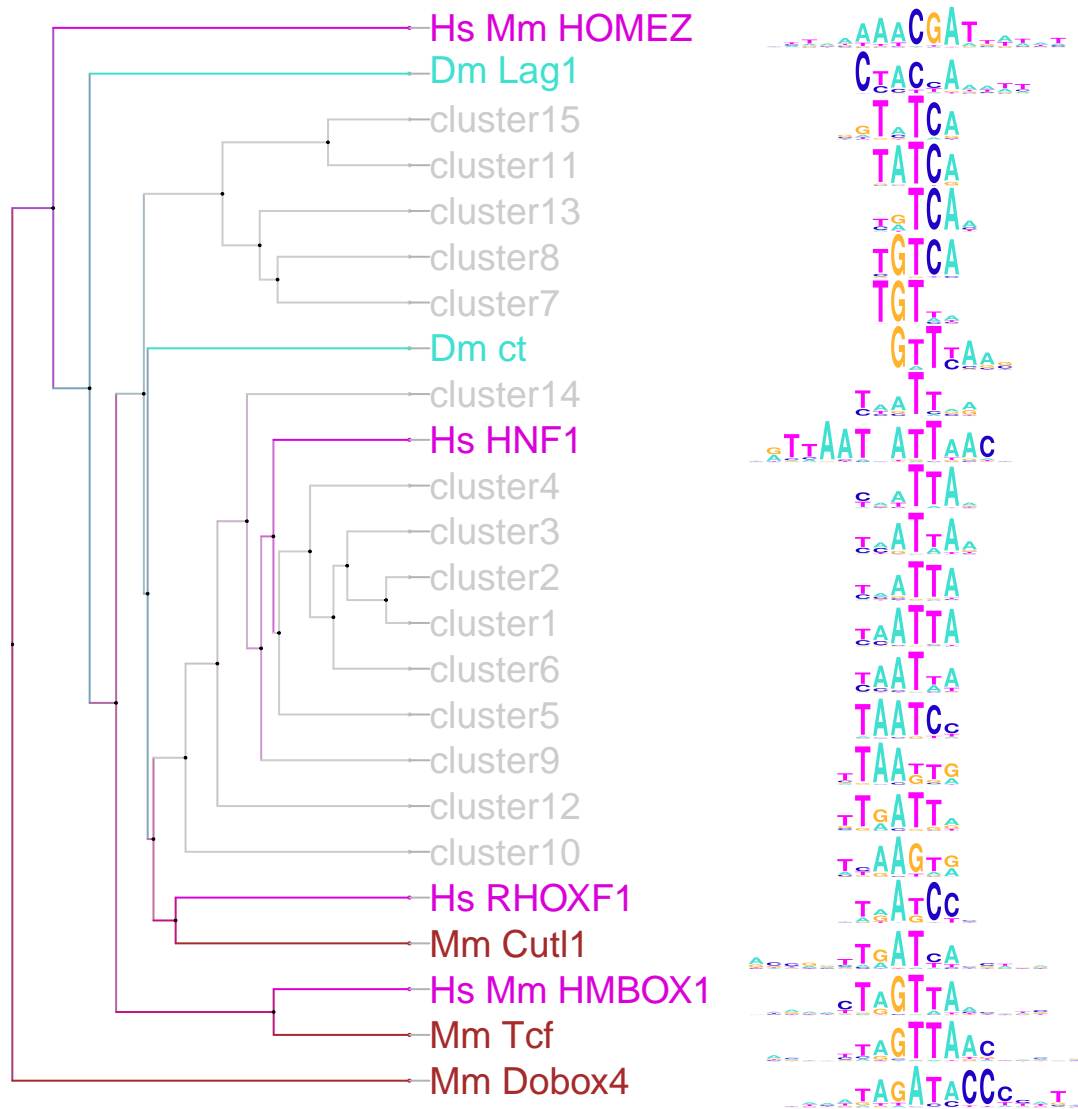

Contents

Supplementary Figure 7A: Species-specific motifs for fly or human/mouse. Species-specific motifs in the HD family are shown in purple (Human/SELEX data), brown (Mouse/PBM data) and turquoise (Fly/B1H data).

Supplementary Figure 7B: Species-specific motifs in the HD family plotted together with common motif clusters. Clusters shared between Drosophila and mammals are shown in gray. Species-specific motifs in the HD family are shown in purple (Human/SELEX data), brown (Mouse/PBM data) and turquoise (Fly/B1H data).

Supplementary Figure 7A: Species-specific motifs for fly or human/mouse. Species-specific motifs in the HD family are shown in purple (Human/SELEX data), brown (Mouse/PBM data) and turquoise (Fly/B1H data)

Supplementary Figure 7B: Species-specific motifs in the HD family plotted together with common motif clusters. Clusters shared between *Drosophila* and mammals are shown in gray. Species-specific motifs in the HD family are shown in purple (Human/SELEX data), brown (Mouse/PBM data) and turquoise (Fly/B1H data).
